Praise for submitter

Nice use of satellite view instead of the default map view. Also, nice icon for the application.

Its probably fine, I just had an error where I was getting a gray tile instead of a map.

I really like the look and feel of your app. Your spinner is unique and looks very good. I also like how you save the markers so transitioning to landscape keeps them.

Functional. Took the time to make a unique looking action bar which is nice. Color scheme in general is pleasing to look at. I liked the zoom buttons in the corner of the map as well.

looks good nice choice in sattelite over street map

Suggestions and Criticism

List of restaurants in the spinner could be alphabetized for an easier search.

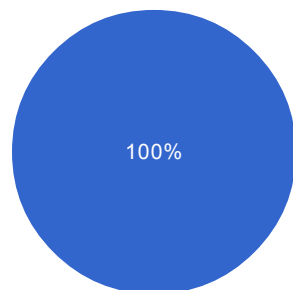

The rolling pin picture in the action bar makes it appear as though there is a navigation drawer, but there isn't. Looking through the code, everything is very hard coded. Perhaps consider using an array and looping through it to add all the markers onto the map to make future modifications easier.

couldnt figure out how to connect the lines?

There is no clear button to erase markers and there were no paths.

Jacob Fowlkes

Location spinner is transparent, which is nice, as it does not clash with the map.

I like the info tag that you have under every marker title.

looks good nice job

Functional. Simple UI that is easy to follow. I liked the zoom buttons in the bottom corner of the map. I also like that your items weren't strictly limited to Bellingham.

I had issues getting the app to load to be tested as they were grey tiles instead of a map for me.

Suggestions and Criticism

I didn't see a way to remove markers from the map. Perhaps add a button to the top of the UI to allow for this. Looking through your code, it appears as though drawing lines between two markers was not implemented.

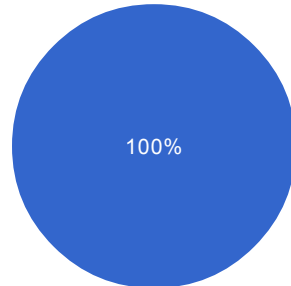

none

There are no paths and there are no markers.

Locations are completely random. I'm not sure what I'm supposed to be finding here.

looks good i like the set up

I liked that you made a customitemselectedlistener class. I think your Point class is well thought out as well. The toast notification when selecting an item on the list makes it very apparent to the user what item they clicked on. I like how the application attempts to grab the user's current location when they first launch it, this is a feature I haven't seen others in the class implement.

seems like it would be fine if I could figure out why all my apps were only showing grey tiles instead of maps

Like the Bellingham theme and the shifted view.

Nice use of a separate blue marker to indicate home.

Suggestions and Criticism

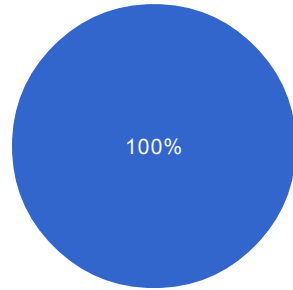

I don't really see why a submit button is necessary here. It feels out of place.

Not sure why the user needs to click the submit button to move the camera. Looking through your code, it looks like you commented out the ability to have it animate the camera automatically.

none

There is no way to add markers or paths.

Great job implementing the action bar. I really like how the user can select between different categories and switch between path drawing and deletion. Also like the zoom buttons at the bottom of the map.

Like the how you had different types of markers and how you used the spinner for them. Also liked how paths was something you have to select.

i like how you have the map at an angle

I like that it allows me to choose different categories of places to search for.

Is probably fine. I had issues trying to test all apps of this nature as google maps wasn't loading on my phone.

Suggestions and Criticism

I wasn't able to draw lines by clicking on two markers

For some reason, tapping on a marker does not give a name of that marker – it just zooms in on the location. Did you not give your markers names?

The on map click markers don't stay around if you click again somewhere else. Also you can't click the markers to see their titles other than the map on click one.

Possibly allow for a user to display more than one category of items on the map at a time. That being said, this was hands down the best project I looked at. Great job.
