Looks great! App runs as advertised, you can scroll around and everything And as a college student, I appreciate having a map of local coffee houses

I see that you attempted to have draw lines, spinner and clear marker functionality. Met criteria 1-3

Everything works great and meets all the requirements. :)

It worked well. Nothing crashed. All requirements were met. It switched between orientations well. Good job.

I really liked the design of the app. I also thought he did a good job with using the spinner. A coffe app idea is a great one for the state we live in. He did a great job overall the look and the feel of the app is great. It also meets all the requitments

Suggestions and Criticism

The paths are just straight lines, but you can use the map api to draw a path along the streets.

It would have been nice if the initial screen showed more/all of the markers.

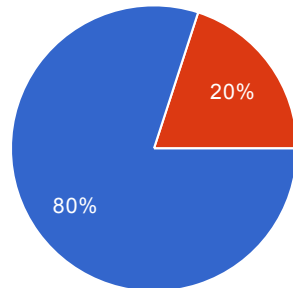

He did alot of hard coding for the marker locations on the map. A better way would of juts been to use a text file that contained all the infromation and stored it in an array. This lead to more extra lines of code. But other than that it was a good job.

Could not get the map to display meaning I could not test any functionality you included. Tried everything I could sorry.

I would have put a text box or something once in the app It wasn't apparent right away that it was a map of coffee houses

Great work! App works as advertised, I liked the choice of scuba dive places to mark out!

I like the look of the satellite map format. You have lots of locations available

Meets requirements 1-6 (B). I like that it uses satellite view (though I'm not sure that was intentional because of all the weirdness with actually running the map apps).

Not turned in on time.

He did a good job at creating a app about dive locations. Ive never really heard about dive locations so it was a unique idea. He did a good job at using basic functions to get the job done. The layout of the app was nice as well.

Suggestions and Criticism

The spinner was hard to see, I would change the color of its background so it isn't clear.

Not turned in on time.

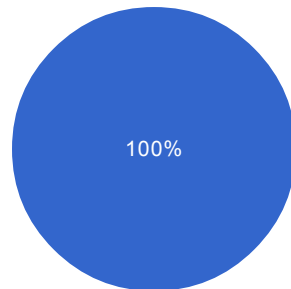

When the map loaded, it focused on the middle of the pacific ocean? (Again, not sure if that was your fault or weirdness with the app.) The items in the spinner are kind of small and hard to tap accurately.

He didnt do the last two parts of the assignment. Which were to created lines and clear them. Also didnt let the user mark their own locations on the map. Other than that he did everything else.

You can't add your own locations. The spinner is hard to see, You can't draw paths.

Nathan Foss

It worked and didn't crash. I also like that it was in that map format (not the default one.)

Good work I like how your map is the satellite map, seeing everything from a birds eye is neat

Everything works as far as I can tell. Meets requirements for a C.

Did a good job moving the camera to the location you click. Didn't do to much so there isn't much to praise.

I like how I was able to load the map automatically without having to do anything. Met criteria 1-4.

Suggestions and Criticism

Didnt do much at all. Just got the app up and let you click locations. There isnt much point to the app. Only had one function that set up the map satalite. Like i said doesnt do much, just the bare minimum to get the map displayed.

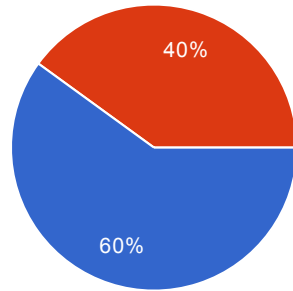

You had 2 weeks to do the project, but only had it display where the person using it is.

The map works a little funny, if I move it away from the marker at school it reenters after a few seconds. When I zoomed in, I saw that all 15ish markers were crowded around Bond Hall, guessing they weren't supposed to be set there

Good work. An improvement would be adding spinner, draw paths and resets.

I love the zombie apocalypse survival theme. It meets all requirements.

Did a good job with the layout. I think is idea for the app was good. Did a good job implementing it .

Everything works great and meets all requirements! I like how you can name the new locations you add, and I love how you came up with a creative and entertaining idea from the assignment specifications!

Cool idea I see attempts to have a spinner and path. Met criteria 1-3.

I like the idea, we talk a lot about surviving the Zombie invasion, and now we have an app to back it up

Suggestions and Criticism

I couldn't get the map to display so I couldn't test out any functionality. I tried everything sorry.

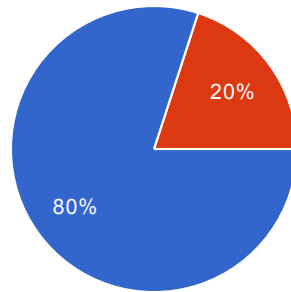

Your paths are straight lines, you can use the api to draw lines along the roads.

The map portion didn't work for me. I can see the header, and the spinner for locations works, but no map appears. I couldn't find a readme, and there are no comments in the code to help get it working...

Not much criticism did a good job. Could of had the layout of a the code be a little more neat but other than that good job.

Spinner works well

He did a job creating a class that stores all the information for the different locations. Did a good job setting up the markers. He just looped through an array of the NamedMarker class he created.

I like how your map display automatically without me having to attempt to make it display. Met criteria 1-6. I like the marker names pretty funny.

I worked really well. I like the creative locations.

Everything works as far as I can tell. :)

Suggestions and Criticism

Map doesn't work, its just a blank screen I checked the readme and code for comments, didn't find a way to fix it Not sure what the things in the spinner are

This was made well. Would like to see attempts on draw line and tap to make marker.

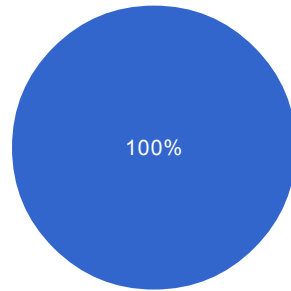

He didnt do the last two parts of the assignment. No lines and line clearing as well as marking random spots on the map. There is no real point at all to the map. It just just marks random locations that have nothing in common. Other than that did a good job.

You can't draw paths and you can't add markers.

I like the marker colors added are a different color than your app's default color. Every requirement was meant and it looks good.

I see attempts of resetting markers and stuff. Met criteria 1-3

Did a great job with his buttons and spinner. The app layout looks really professional like a professional app i love it. He had a good idea displaying local locations around bellingham. Good job creating a array of all the locations and just looping through them when creating the markers. Did a great job overall, met every requirment listed.

I liked the concept, having a map of local foods is quite handy Spinner and other widgets worked, and the code looked good
Everything works great and meets all requirements. I like how the default markers are different colors than the user-made markers.

Suggestions and Criticism

It would have been nice if the initial screen showed more/all of the markers.

Map did not display so I couldn't test any functionality. I tried everything sorry.

I couldn't get the map to work, it just showed up as a blank screen

None met all requirements and made a beautiful looking app.

Your paths are a straight lines when you could use the api to draw a path with directions from one location and another.
