It plays music as required. Controls seem nice.

It looks great. Good music choice.

I really liked the volume slider, a thing I wish more media players had. Also, I think its great you included a way to loop a song.

I like how the song doesnt restart when the device is turned into landscape mode

Very simple and clean like the landscape mode for the music player.

Suggestions and Criticism

MP3's are lossy, so you should consider using a lossless file type such as flac. The volume not scaling from 0->100 is confusing. Selecting a song doesn't seem to work? it brings up the menu but clicking something else doesn't go anywhere.

Crashes on trying to select a different song :(

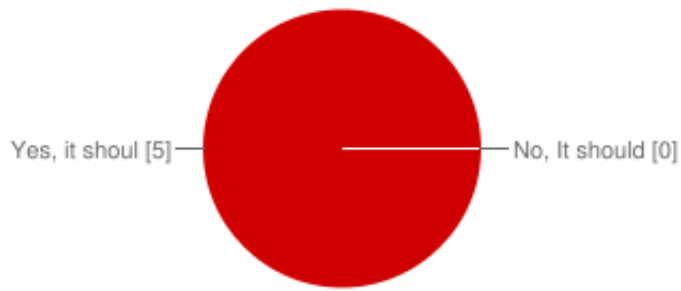

crashes when back button is pressed

No saved state. Crashes when pressing back button on the select song activity.

A great way to extend this program would be to spruce up the interface with a theme, especially for the buttons. Also, it would probably future proof the app if you converted your button group into a list view that was populated by an adapter.

cool idea saving picture and drawing on it

Very cool that you can switch apps then back to yours while making the data persist.

Great potential for the UI.

It works, I like your icons since they are more than just text buttons.

Works well. I like the idea.

Camera works, I guess.

Suggestions and Criticism

No saved state. No pausing sound files. Second activity doesn't do anything for me.

None of the functionality other than the camera feature works. I am not sure what any of the "new button"s do.

I wish the buttons had done a little bit more, perhaps let the user modify their picture with some built in effects?. The UI has great potential, perhaps modify the ImageView to

take up more of the user's screen?

second activity doesnt seem to work correctly

Simple and clean like the interface.

Simple and functional. I like how the song automatically plays at the end of the game,

Works. I like the little tune you play at the game over screen.

Looks good, its tic tac toe.

simplistic and clean style

Suggestions and Criticism

Perhaps a different song for cat's games? Also, making custom buttons or having the ability to theme the app would be an awesome addition.

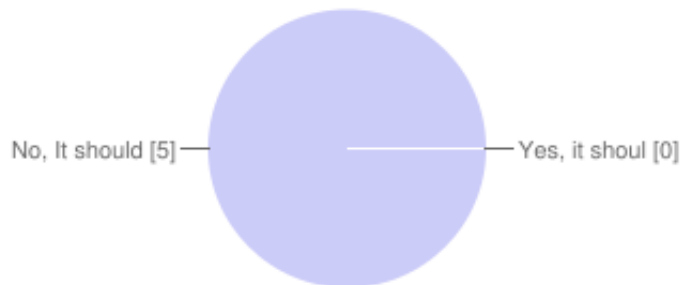

Doesn't have music.

No saved state. Can't pause the sound file and activities restarts on orientation changes.

doesn't save state or gracefully transition to landscape

Good UI, good anime songs. I only scored a 7/10, so I guess I need to watch more animu.

Music choice is interesting.

You handled rotation properly! Nice work on the UI, it utilizes space very well. The app is very fluid and not laggy at all.

nice work smooth transitions no crashes or errors

Very good! Works great!

Suggestions and Criticism

No saved state.

no saved state between runs

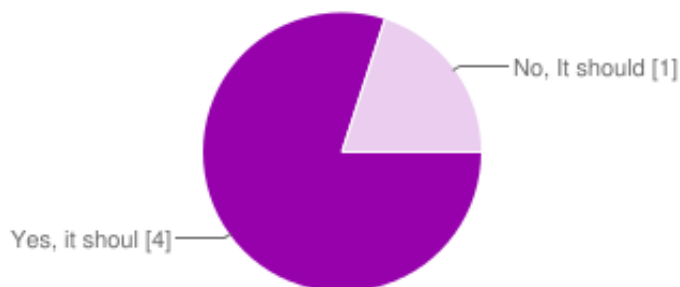

Perhaps an activities for winning and losing and add music to them? Great work, maybe for a fun addition, load the songs from a URL or make the app Material themed.

If you hit back when on the score screen it just brings you back to the 10th question.

No app-debug.apk to run. Had to add in my own gradle build script. Please for the love of all that is right, run the assemble gradle command before you turn anything in.

Love the charmander tattoo!

Nice choice of hangman words and images.

It works! The game works fine, and the charmander is colorful.

funny charmander tattoo idea

The app is functional.

Suggestions and Criticism

The UI is a little wonky and doesn't utilize space very well, in portrait mode. Consider using fragments for a more dynamic UI. The app only uses one activity. The game resets when the orientation is changed. The image is cut off in portrait mode. All widgets are default. Perhaps try themeing them.

Landscape mode restarted activity and bugged out. No pause button. No saved state.

Looks similar to the last assignment.

Your ui looks awful for me. <https://dl.dropboxusercontent.com/u/20887378/datui.JPG>

Displays kinda wonky on my phone.

does save state, couldn't find second activity, does not gracefully transition to landscape.
