Cool text style and colors!

Nice app, there's a lot going on here! Good use of action bar. Original visual style.

Jukebox is outstanding, works great, lots of features, found and allowed me to play the music already on my device with no problem! Functions smoothly.

Tic Tac toe works well with changing orientation, at least in how it looks.

Really nice implementation of games. Many options. Music works, has some issues with landscape to portrait transition.

It ran, did what it was supposed to and it looked relatively nice. As I'm new to this that's more than enough for me.

Suggestions and Criticism

Not a relative layout so I cannot view your app at all! Also seems to be incredibly slow but that could just be the emulator.
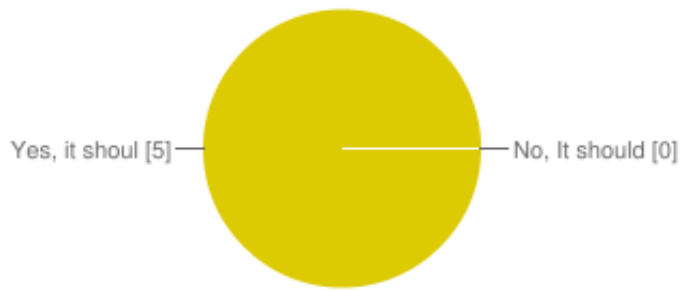

All game data is deleted when changing orientation. Not all screens handle orientation changes.

When playing hangman the transition between landscape and portrait has an issue in where the landscape view bugs out and you cant play the game anymore. Also happens in another activity. Otherwise good job.

UI doesn't display well (things get cut off and overlap a lot) on medium to small sized screens. Crashed a couple times on me. No readme, but the help page makes up for this (though I still have no idea what the practice page is for).

The application worked and I liked the layout.

Looks nice. Great pictures and cool idea to be able to replace them with your own.

Nice ability to take a picture from 2nd activity and then it shows up on the first activity. Well done.

Good idea for the app based on the project requirements. I like the use of the camera. Nice app icon!

The ability to change the pictures in the app is really cool. Plays all the sounds correctly. Really well done.

Suggestions and Criticism
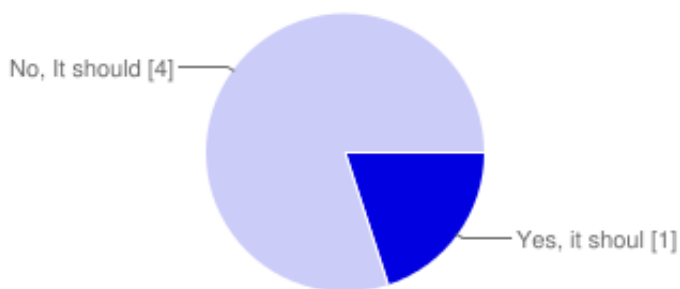

Landscape mode has visual issues but thats all!

The landscape view squishes the last row of pictures together instead of making a scroll able view that allows you to scroll down and click the picture. My recommendation is to implement a scroll able view for the landscape view of the app. Otherwise great job.

Use a Scroll view for those of us who do not have a tablet the same size as yours!

Initial page displays oddly on landscape orientation (second row icons are very small, top row is very large). Taking pictures with the camera only replaces the images on the main page, and removes the info page image (not sure if intentional?).

I liked the music.

Really nice background and the look and feel of the app feels smooth. The way the keys light up green when you get a correct letter and red otherwise. Feels kind of like hangman. Landscape and portrait works great, music works correctly. Shifts between screens.

Really great UI, handles turning the screen with cool fragments. Light up keyboard is a great touch.

Nice take on the traditional hangman game. Good layouts for both landscape and portrait. App functions smoothly. I liked the results page and tile screen music.

Looks good!

Suggestions and Criticism

No save state that holds previous scores. Can't really pass data from one activity to another.
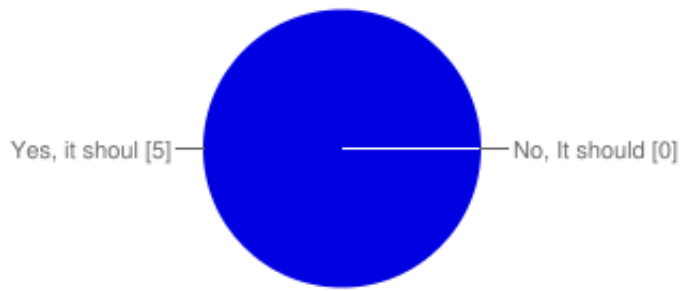

Couldn't test program due to what appears to be an overallocation of memory by your app.

Rotating the device while game is in progress resets the game completely. Some elements get cut off on lower dp screen sizes. Perhaps use QWERTY layout instead for faster entry?

A new song starts and plays over the old one everytime the screen is turned. If you have entered in a guess and then turn the screen it is no longer shown.

Nice coloring in the second activity. Cool to see what America thinks will happen.

Great landscape to portrait transition. Music works. Passing from activity 2 to activity 1 works. Has met all constraints. Great job.

Interesting concept. Handles the orientation changes really well.

I enjoyed messing around with the app and I think that's the most important thing.

Good, original idea. Functions smoothly and is intuitive. Displays well in portrait and landscape layouts, and transitions smoothly between the two.

Suggestions and Criticism

None, did all that was required in assignment.

Kind of hard to read with busy background.

Percentages are in incorrect format. Doesn't really pass any info between the two activities. Doesn't display radio buttons correctly after rotation.

Secondary activity does not respond well to rotation (retains the layout for whichever orientation it was opened in, resulting in some options being cut off). Settings menu does not do anything.
