| 4 | **1** | 20% |
| 5 | **3** | 60% |
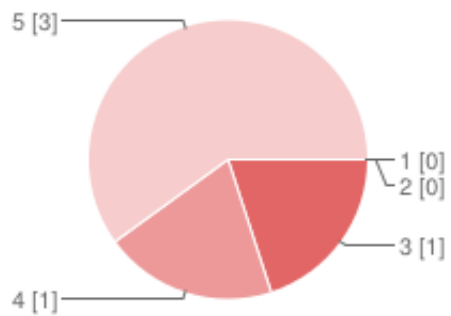

## Praise for submitter

I enjoyed the app. It fulfilled all the requirements of the assignment so I believe it should receive full credit.

A nice simple compact design. Has a one letter text field which takes in input from user to guess for a letter and then makes the appropriate decision in whether the guess was correct or not by outputting the either correct response by changing the hidden letter or by failing to guess the correct answer and creating the consequential image. Also has reset button so you can replay the game if you get tired of guessing. Very nicely done. And the toasts are very well done when the user enters in the incorrect inputs or duplicates. Overall nice job!

Nice color scheme and use of relative layouts. Easy to understand what is going on.

Works smoothly. Groovy color scheme.

Edited the background color. Clear alerts when you win/lose/reuse a letter
Understandable layout.

## Suggestions and Criticism

Maybe add some feature in which you keep track of points, even though its not really necessary for this assignment.

Enter button doesn't submit the guess. Also seems to run very slow and AS is telling me its skipping lots of frames for some reason.
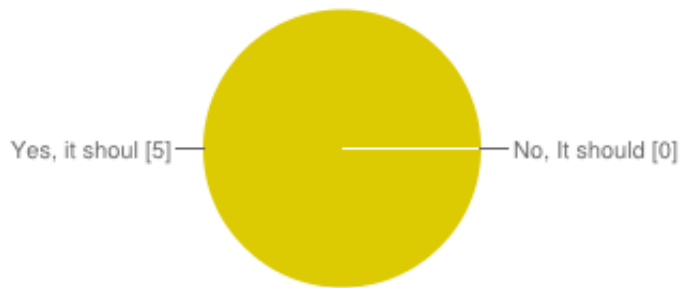

UI gets messed up (off-screen) when rotating from landscape to portrait and back.
Allows the user to guess uppercase letters, but does not match them within the word.

Changing the enter button on the keyboard to make a guess.

## Praise for submitter

Nice use of the clock. Very easy to understand what is going on!

Interesting application, it did what it's supposed to and worked for the requirements.

Really interesting UI, easy to understand. Really liked how you moved the hands on the clock.

Good, simple idea.

The color of the clock and the design looks very clean and simple. The rotating clock has a very smooth drag and drop feature that allows you to set your alarm at the exact time with the clock headers. On button produces sound once the clock reaches that point and then has a off option to turn it off.
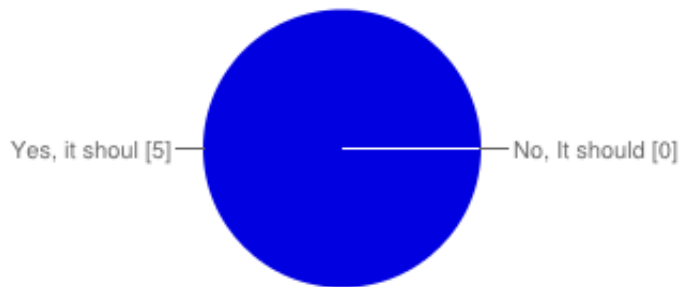

## Suggestions and Criticism

Maybe for a future release implement a snooze button that allows the clock to sleep for a certain period of time and then go off again.

On/Off button is kind of ambiguous.

Freezes up, often crashes when turning alarm on. Alarm only seems to trigger if set to the current time?

## Praise for submitter

Awesome graphical user design, the color of the clock and the design looks very clean and simple. The rotating clock has a very smooth and nice drag and drop feature that allows you to set your alarm at the exact time with the clock headers. On button produces sound once the clock reaches that point and then has a off option to turn it off.

Different idea really interesting UI. Great idea

Good, simple idea.

Looks good, used layouts correctly

Did everything it was supposed to. Good job.

## Suggestions and Criticism

Maybe implement an addition to the program a snooze feature which allows the clock to sleep for a few minutes as in traditional alarm clocks.
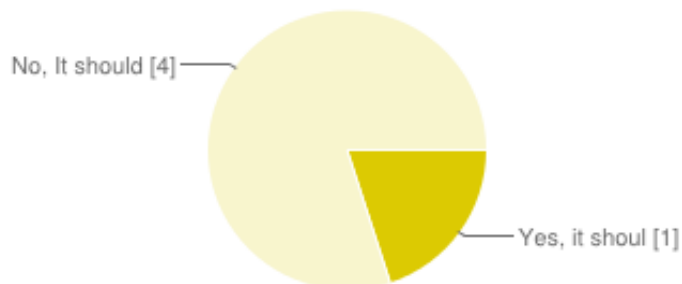

Freezes device while alarm is playing.

The alarm doesn't go off unless you click on the on/off button during the correct time

Freezes on alarm, I believe because the stop activity doesn't come up?

## Praise for submitter

Did not have submission.

It does everything it's supposed to, not much to say besides that.

Didn't see a project turned in.

## Suggestions and Criticism

Did not have submission.

No submission present.
